

North Sea Transition Deal

Integrated People and Skills Strategy Case Study

Associate Project Engineer Ross Sheldon switched to Worley's low-carbon energy division, where he is supporting the offshore wind sector and providing project management expertise for green hydrogen development.

Currently supporting customers with the delivery of multiple green hydrogen and ammonia projects, Ross has successfully transferred the core knowledge and expertise gained from his time working as a process engineer within the oil and gas industry for both UK and US offshore assets.

Ross sought out opportunities to work on a project that would positively impact the current energy transition. Initially, looking at the different components of the offshore wind space and how all the disciplines integrate, Ross wondered how he could apply his skillset to support ongoing developments.

He credits his grounding in offshore projects for providing him with the skills and experience to contribute to the growth of an integrated energy industry and develop a cross-sector career.
